Newbury

Competitive salary and benefits package

Permanent - Full time

About us

At Amberjack we've long been setting the standards in future talent and intake-based volume recruitment. Our advanced systems and intelligent solutions are designed to deliver the ultimate recruitment experience. From intelligent attraction to recruitment process outsourcing and bespoke assessment and selection tools, we work as an extension to our client's teams. We are the quality behind the quantity. We do what's right for our clients and their candidates. We don't know any other way.

The role

Our technology team work with a diverse range of clients from Unilever, Mars and PwC, to GSK and Morrison's, creating bespoke volume recruitment tools and processes that will deliver results.

You will have primary responsibility for data and information security within Amberjack and across all of its processes, technical systems and solutions where data information is handled including:

- Leading on implementing effective technology solutions that prevent internal and external malicious users from compromising data integrity
- Protecting Amberjack's information, whilst supporting colleagues, clients and the company's strategic objectives
- Being the face of Data and Information Security, both internally and externally supporting clients and managing enquiries on data and information security issues
- Raising the awareness and standards within the business around the use, management and storage of data and information

Who we're looking for

This role will suit someone who has come from a highly regulated business environment such as financial services or pharma/medical companies or a large corporate, where you have developed your experience in a large team and now looking to put your stamp on a green field opportunity. You will have:

- Degree - ideally in Information Technology/Systems
- Relevant professional qualification - CISSP, CISM or (ISC)<sup>2</sup> preferred
- Minimum of 10 years broad IT experience preferably with 5 years in an infrastructure engineering role, and at least 4 of which has been in a security role
- Broad awareness of hardware/software, standards, security products and Cyber Threats
- Good working knowledge of quality assurance principles and practices
- Up to date knowledge of GDPR and computer-related legislation
- Implementation and management of ISO 27001
- Experience of designing and undertaking information security audits
- Security incident management, investigation and reporting
- Development of data and information classifications
- Data and information risk management

## Why work for us?

In return we offer a competitive salary and benefits package, a collaborative, open and friendly working environment, and great opportunities for personal and professional development.

## How to apply
